

# FULDA CLINIC, NEW EMERGEN

## Reference

**Fulda, Germany**

---

### General:

<b>Concept/Product:</b>	,
<b>Building Type:</b>	Hospital
<b>Client</b>	Klinikum Fulda gAG
<b>Specialist Planner Clean Rooms Engineering Office</b>	Prof. Dr.-Ing. Vogt Planungsgesellschaft mbH
<b>Completion:</b>	2019

### Description:

With the new operating and emergency center, the Fulda Hospital, a regional maximum care center with approximately 1,100 beds, has been expanded to include a new building with 37,000 m<sup>2</sup> of floor space and 14 state-of-the-art operating theatres. The investment volume was approximately 70 million euros. At the heart of the new "INO Center" (Emergency Operations) is the emergency room, which is twice as large as the previous one, with its two intensive care units. In the planning of the new building, great importance was attached to making the paths as short as possible and adapting them to the processes.

Through its Clean Rooms division, Lindner SE has contributed to the fit-out of the 14 operating theatres. With plasterboard walls, the rooms were delimited from the hallway, with access via sliding or swing doors. The swing doors were partially designed with T30 fire protection and also equipped with automatic door drives. Glass wall coverings were created in the operating theatres; a hygienic solution that seamlessly integrates the various installations such as ventilation units and screen inserts and hides the building services in a visually appealing manner. From a technical point of view, the overall requirement for all products was to ensure radiation protection of 0.5 and up to 1.5 Pb.

## Completed Works:

### Clean room partitions

Glass partitions

### Clean room doors

Sliding doors

Hinged doors

Fire Protection Doors

### Equipment

Radiation protection windows

### Plasterboard partition systems

Metal stud plasterboard partition systems
