Concept/Product: , , , ,
Building Type: Office buildings
Builder Projektgesellschaft GmbH & Co – Mailänder Straße – KG
Project Controller Delta Bau AG
Completion: 2021 - 2023

Description:

The Torhaus Expopark – designed by the architectural firm BKSP – is a new office and administration building located in the Expo Park in Hannover, serving as a representative entryway to the entire complex. Spanning an area of 9.500 m², the Torhaus offers customisable office spaces and is notable for its proximity to restaurants, supermarkets, and other businesses within the dynamic commercial park. In addition to a high technical building standard, the Torhaus also combines energy efficiency and comfort within the building through an innovative access concept and tailored building technology.

The Lindner Group played a pivotal role in realising the modern work environment with its execution of the interior fit-out. Various ceiling systems meet high technical demands: while metal ceilings contribute to the overall aesthetic and provide sound insulation, installed heated and chilled ceilings are a key element for an energy-efficient temperature management of the building. Flexible system partition walls ensure variable room division, adapting to the changing needs of everyday office life. To further increase efficiency and comfort, various floor systems were installed to facilitate easy integration of electrical installations.

Completed Works:

Plasterboard ceiling systems
Plasterboard partition systems

Plasterboard frieze**Heated and chilled metal ceilings**

Plafotherm® B 100

Hollow floor systems

FLOOR and more®

FLOOR and more® power
