

OFFICE BUILDING NEST REG

Reference

Regensdorf, Switzerland

General:

Concept/Product:

Building Type: Office buildings

Completion: 2023

Description:

On the former Renault site in Regensdorf, a new six-storey office and commercial building has being erected, which – thanks to innovative energy and construction concepts – impresses with a sustainable building method.

As part of this project for Volvo Cars Switzerland AG, Lindner provided innovative solutions for the interior fit-out of the third floor. System partition walls made of glass and wood as well as fitting doors create an undisturbed working environment in the offices, thanks to high sound insulation. The modular wall systems can be flexibly installed and allow for individual room design options: Lindner therefore meets Volvo's modern requirements for flexible and communicative workspaces. Coloured partition wall systems also set colourful accents in the building and increase the well-being of employees.

Completed Works:

Glass partitions

Life Clear

Partitions

Timber partition - Lindner Logic

Doors

Wooden door HTB 68

ATB 42
