Building Type: Office buildings

Client DATEV eG

Architecture Boesel Benkert Hohberg Architekten

Completion: 2014 - 2015

Description:

The IT service provider and software developer DATEV eG extended its capacities with the new office building "IT-Campus 111". The building features 1,800 workplaces and 150 places of retreat, together with modern conference and meeting rooms. The architecture and equipment of the office areas support both internal communication and concentrated working all the while creating ideal overall conditions for work routines in modern software development.

Lindner's performances play a crucial role in the interior design concept. In order to create the aforementioned spaces for concentrated working and meetings, Lindner partition systems and doors were installed. Designed as the room-in-room system Lindner Cube, these partitions excel at creating a pleasant room atmosphere in open-plan offices. This effect is enhanced by Lindner canopy ceilings with integrated heating and colling technology, installed in meeting rooms.

Completed Works:

Heated and chilled canopy ceilings

Plafotherm® DS - Canopy ceilings

Glass partitions

Lindner Life glass partitions

Room-in-room systems

Lindner Cube

Partitions

Timber partition - Lindner Logic
